

# GP Almo

**GP Almo** is a sinking pellet product with high carbon and fibre content that acts as a water treatment agent to reduce ammonia/nitrite/nitrate levels and serves as food for bottom feeders such as shrimp. The  $\alpha$ -monolaurin, herbal extracts and mineral complex in **GP Almo** protects against pathogenic infections such as white spot syndrome virus (WSSV) and acute hepatopancreatic necrosis disease (AHPND). The tannins released by **GP Almo** also contribute to antibacterial, antifungal and powerful healing properties. The presence of herbal extracts in **GP Almo** perfectly mimic the natural ecosystem in aquaculture. **GP Almo** also provides favourable pH conditions for the shrimp spawning and moulting processes. Thus, increasing the success rate of aquaculture.

## Functions

1. Prevents disease infection.
2. Antibacterial, antifungal, anti-inflammatory activities.
3. Boosts immunity.
4. Promotes shrimp breeding and hatching.
5. Improves the success rate of moulting.
6. Water conditioning agent.

## Composition

$\alpha$ -monolaurin  
Herbal Extracts  
Tannin  
Mineral complex

## Recommended dosage

Shrimp	0-60days	The inclusion rate is 1:1
	>60days	The inclusion rate is 1:3
Fish	0-60days	The inclusion rate is 1:2
	>60days	The inclusion rate is 1:5-10

## Storage

Store in a cool and dry place.  
Reseal the liner when not in use.
